Imran Ansari

Imransxcr53@gmail.com | Jamshedpur, Jharkhand

Profile

Python Backend Developer with 3 years of experience in developing scalable and efficient web applications. Skilled in Django, database management, and cloud services. Adept at full-stack development, with recent experience expanding into frontend technologies like React. Committed to delivering high-quality solutions that optimize performance and enhance user experience.

Work Experience

Django Developer
Relu Consultancy | October 2021 – Present

- Developed and maintained dynamic web applications using Django.
- Managed databases (MySQL, PostgreSQL), including schema design and performance optimization.
- Deployed and managed applications on AWS, Linux, and Windows Server environments.
- Troubleshot application and server-side issues, ensuring high availability and smooth operations.
- Set up and optimized cloud services and infrastructure.

Projects

NHAI (Government Web Application)
A role-based web application designed to manage and monitor road projects across Maharashtra, tailored for stakeholders like CALA, district collectors, and principals.

- Automated monthly progress reports and daily email reminders for project deadlines using Celery.
- Developed REST APIs with Django REST Framework for seamless data interaction.
- Leveraged MySQL for data storage and hosted the application on an Ubuntu server for reliable performance.

Leasing Scraper (Car Leasing Price Tracking Web App)
A robust web platform for monitoring car leasing prices, including competitor analysis.

- Scraped daily data from leasing.com using Scrapy, ensuring real-time pricing updates.
- Designed a user-friendly dashboard for filtering and comparing cars by leasing terms, derivatives, and more.
- Enabled watchlist functionality with price tracking and graphical visualizations for better insights.
- Backend: Django REST Framework | Database: PostgreSQL | Task Scheduling: Celery.

Shotlocker Mobile App (Golf Score Tracking System)
A golf score tracking app enabling users to log scores and monitor performance over time.

- Implemented secure Google and Apple social login for user registration and authentication.
- Designed REST APIs with Django REST Framework and stored data using MySQL.

Triggify (LinkedIn Automation Tool)
An automation tool for monitoring and engaging with LinkedIn posts based on user-defined triggers.

- Features: Keyword-based triggers, daily email summaries, and automated post interaction.

- Integrated Stripe for subscription.
- Backend: Django REST Framework | Database: PostgreSQL | Deployment: AWS EC2.

Aesthetics Record (EMR Migration)
Developed data scraping scripts for EMR platforms (Kareo, Vagaro, etc.) and automated the migration to Aesthetics Record EMR.

- Scraped patient records, appointments, documents, and demographic details using Selenium and Requests.
- Uploaded data to S3 and executed AWS Glue ETL jobs for document mapping.

Skills

- **Languages:** Python, JavaScript
- **Frameworks:** Django, Django REST Framework, Bootstrap
- **Databases:** MySQL, PostgreSQL
- **Tools & Technologies:** AWS, Git, Docker, Linux, Nginx, Postman, Stripe
- **Frontend:** HTML5, CSS3, React (beginner)

Education

B.Tech in Electronics & Communication Engineering
Gandhi Engineering College, Bhubaneswar | CGPA: 6.45 (2018)

Extra-Curricular

- Won prizes in sports and quiz competitions.
- Coordinator at College Cultural Festival.

Languages

- English
- Hindi
